PROGRAM**

# FATHER JOE'S VILLAGES RECUPERATIVE CARE PROGRAM (RCP)

## WHAT WE DO

Some of our neighbors do not have a home where they can continue healing after leaving the hospital. Recuperative care bridges the gap between discharge and a full recovery, improving outcomes, and reducing hospital readmissions.

The RCP offers housing, case management, meals, and healthcare services to individuals who are exiting the hospital but are too sick to go back to the streets. This is not a long-term housing program but serves as a bridge to other housing and social service programs. Average length of stay is 4-6 weeks and varies based upon each participant's health status.

## RCP REFERRALS

The program accepts referrals from contracted hospitals and health plans for patients who would otherwise be discharged to the streets, their vehicle, or other areas not meant for human habitation where they cannot adequately recover from presenting health conditions.

Please complete our online Referral Form found at: [my.neighbor.org/RecuperativeCare](https://my.neighbor.org/RecuperativeCare)

Our team will review the referral within 1 business day and reach out to discuss next steps.

## HEALTHCARE

Health services are provided onsite through the Village Health Center, a Federally Qualified Health Center (FQHC) recognized by NCQA as a Patient-Centered Medical Home (PCMH).

Services include primary care, psychiatry, dental services, behavioral health care, medication-assisted treatment (MAT), as well as an onsite lab and pharmacy.
